

# Mastercard® SecureCode™

First Security Bank is pleased to offer this valuable service to enhance your existing First Security MasterCard CheckCard. SecureCode is a private code which offers added protection against unauthorized use of your card when you shop online.

## How Does SecureCode Work?

Every time you pay online at a **participating merchant** with your First Security CheckCard you will be automatically prompted to enter your own private SecureCode -- just like entering a PIN at the ATM. With MasterCard SecureCode, only you and anyone else you designate can make purchases using your First Security MasterCard CheckCard at participating online merchants. And, of course, your SecureCode, just like your PIN, is completely private.

## How Do I Sign Up for SecureCode?

Choosing your own private SecureCode is quick and easy. When shopping online at a participating merchant, you will be prompted to create your own SecureCode prior to checkout. When this happens, a new window appear and you will be guided through the simple enrollment process before your purchase is completed. Once you have created your private SecureCode, you will use it for future purchases at participating online merchants.

Please make sure you keep a record of your new SecureCode for future online purchases. Store this information securely and safely, just like you would your PIN.

## Access MasterCard SecureCode

Click on the link below to access MasterCard SecureCode. On this site you can register your debit card and update your profile.
